EUROPEAN SPACE COMPANIES AND GLOBAL COMPETITIVENESS: HOW FINANCE CAN INTERVENE

Business and financial solutions for small and medium space enterprises to face the global challenges posed by the evolution of the space economy.

6.30 PM • 7.30 PM CET

The webinar focuses on small and medium size European space companies' strategies and the role of the financial industry in bolstering their competitiveness.

- What strategies and financing mechanisms can support the economic and sustainable growth of small and medium commercial endeavors beyond the European industrial policies and procurement structures?
- Is it possible to assume a private internationalization strategy that leads to a diversification of the customer base besides the European public and private demand?
- Is it possible to assume a consolidation process through merger & acquisition (M&A) operations to create "new space champions" (in particular, in the upstream segment) capable to compete in the international market?
